presented by Calgon Carbon's technical team*

Treatment/Removal of Perfluorinated Compounds (PFCs) with Granular Activated Carbon

Monday, January 30, 2017

11:00 am (Eastern)

8:00am (Pacific)

Join Calgon Carbon for a webinar that will focus on the treatment of PFCs using Granular Activated Carbon (GAC).

The session will cover:

- What are PFCs?
- Where are PFCs found?
- Why are PFCs a concern to humans and the environment?
- What effective solutions exist for PFC removal and disposal?

- What are the various performance test methods?

The session will also cover several recent case studies evaluating multiple carbons for the treatment/removal of PFCs.

GAC is a proven technology for the treatment/removal of PFCs from the environment. Calgon Carbon has over 15 years of experience treating this family of compounds.

Register now to learn about the simple solution to a serious problem.
